

# 2012 New Products

**KOHLER** Generators

KOHLER

## We Made Everything Easier. Including Your Life.

Below you'll find the latest additions to our growing family. Durable, reliable and downright powerful, these products are meant to get you through blizzards, brownouts and everything in-between.

### OnCue® Generator Management System

We revamped the OnCue system for easier installation and more control. Users and service partners can now easily connect to the generator's controller for real-time status updates on performance and operation.

### KOHLER 14RESA and 20RESA

We've upgraded our most popular 14 and 20 kW generators with lower sound levels, an easy-to-read display and a redesigned controller compatible with our new load control and programmable interface module.

### KOHLER 48RCL

The new 48RCL is a whole-house generator that provides complete protection for 200-amp electrical service with a small footprint, corrosion-resistant aluminum enclosure and surprisingly quiet sound levels.

### Load Control Module

If you chose a smaller generator to power your home, our load control module can help manage higher electrical loads. During a power outage, the entire home will be connected to generator power, but some circuits may be cycled on and off to prevent overloading.

### Programmable Interface Module (PIM)

With the OnCue system, PIM gives you more control than ever before. With the touch of a button, you can now turn on critical items (storm shutters, security systems, etc.) while away.

### RXT Automatic Transfer Switches

Our new RXT enclosures are constructed from corrosion-resistant aluminum and rated for outdoor use. The new switches also offer the option of an exterior display for remote system status.

### RDT Automatic Transfer Switch

Our most advanced automatic transfer switches just got better. Now featuring corrosion-resistant enclosures on all outdoor-rated models, the RDT transfer switches are the best money can buy.
